GreenGood Features

Long – life Decomposition Microorganism

GreenGood user powerful microorganisms which multiply in high temperature. High salinity and high acidity environment unlike other microorganisms. At the same time. Longevity of powerful microorganisms have no additional maintenance.

Nano Deodorization System

The nano material acts as catalysis in decomposing foul odor into water and carbon dioxide to release it into the air. This application of nano technology is environment – friendly and requires no additional maintenance cost.

FOOD WASTE TO COMPOST IN 24 HOURS!

GREENGOOD COMPOSTER

AN ON-SITE FOOD WASTE MANAGEMENT SOLUTION

What are GreenGood Composters?

They are In-vessel composting machines that use a composting technology to compost food waste and reduce volume by up to 90% in 24 hours.

The output is an immature compost that is then cured and used as a soil amendment in various horticulture applications.

Why GreenGood Composters?

24 Hour Composting Process turns food waste into compost in 24 hours.

Flexibility to input food waste and off load compost at your convenience.

Cost Effective at reducing garbage volume and bin pickups per week.

Health Perception, odour controlled and pest deterrent.

Social Responsibility to reduce methane gas created by food scraps in landfill

Why Compost Food Scraps?

Food scraps at landfill create methane gas - one of the gasses that contribute to global warming.

By composting food scraps with GreenGood composters, methane gas can be reduced, and by decreasing number of tote pick-ups per week, carbon footprint is also reduced.

Common Applications

GreenGood Composters are for any businesses that produce food waste.

- Schools & Universities
- Shopping Centres & Food Courts
- Hotels & Restaurants
- Farms & Food Processing Factories
- Grocery Stores

...and more!

GreenGood Capacity

A wide range of GreenGood composters are available to suit each business' needs.

GG02s 2 tons of food waste/year

GG10s	10 tons of food waste/year
GG30s	30 tons of food waste/year
GG50s	50 tons of food waste/year
GG100s	100 tons of food waste/year
GG300s	300 tons of food waste/year
GG500s	500 tons of food waste/year
